The Contact Us page is organized to maximize SEO and reach high Accessibility standards. For SEO, there is a meta tag with many relevant keywords for search engines to find and recommend the page. In terms of accessibility, the page is organized using semantic tags under the body, with a header, main, and footer, and each of these having relevant tags such as sections. Additionally, the nav tag in the header has an attribute called role that explains it's for navigation. Lastly, the input types in the Contact Us form are the best fit for what's being submitted: text for name, email for email, textarea for a potentially large message, and submit for the submit button.
